Basis for measurement:

ISO 354:2003 Acoustics - Measurement of sound absorption in a reverberation room

ISO 11654:1997 Acoustics - Sound absorbers for use in buildings - Rating of sound absorption

Test conditions:

- Mounting (acc. to ISO 354): Type G-100 (test item parallel to the wall)
- Test setup: flat arrangement; clear distance to the wall d = 10 cm
- Volume of reverberation room 254,5 m²
- Test positions of test item: 1
- Number of measurements: 36 decay curves
- Test signal: sinusoidal sweep (backward integrated impulse response)
- Frequency range: 100 Hz - 5k Hz (evaluated)
- Climatic conditions: temp.: 22,0 °C; atm. pressure: 988 hPa; humidity: 39,5 %

Determination of sound absorption coefficient α according to ISO 354:

$$\alpha_s = 55,3 \cdot \frac{V}{S} \left(\frac{1}{c_2 T_2} - \frac{1}{c_1 T_1} \right) - 4 \cdot V(m_2 - m_1) \quad \text{Equation (1)}$$

α_s Sound absorption coefficient;

S Area covered by the test item in m²;

V Volume of the empty reverberation room m³;

c_1 propagation speed of sound in air in the reverberation room without test item in m/s;

c_2 propagation speed of sound in air in the reverberation room with test item in m/s;

$$c = (331 + 0,6 \cdot t) \quad \text{Equation (2)}$$

t air temperature in °C

T_1 reverberation time in the reverberation room without test item in s

T_2 reverberation time in the reverberation room with test item in s

m_1 power attenuation coefficient in the reverberation room without test item in 1/m

m_2 power attenuation coefficient in the reverberation room with test item in 1/m

SUMMARY OF TESTING

Classification of sound absorber classes according to EN ISO 11654, Annex B

Sound absorption class	Weighted sound absorption coefficient
A	0,90; 0,95; 1,00
B	0,80; 0,85
C	0,60; 0,65; 0,70; 0,75
D	0,30; 0,35; 0,40; 0,45; 0,50; 0,55
E	0,25; 0,20; 0,15
Unclassified	0,10; 0,05; 0,00

Form indicators

If the sound absorption level at one or more frequencies is significantly higher than the values of the shifted reference curve, one or more form indicators shall be given in brackets in addition to the weighted sound absorption coefficient α_w .

The following assignment applies:

Absorption exceeded at 250 Hz	Form indicator L
Absorption exceeded at 500 Hz or 1k Hz	Form indicator M
Absorption exceeded at 2k Hz or 4k Hz	Form indicator H

Note

If a form indicator is used, the following sentence should be added to the result:

"It is strongly recommended that this singular rating be used in conjunction with the complete sound absorption curve, which can be obtained on request."
